INFLATABLE RESCUE TENTS

INFLATABLE RESCUE TENTS

- △ Ideal headquarters during a rescue operation
- △ Simple, fast and mobile solution for protecting people, material, technical devices or vehicles against unfavourable wind conditions
- △ A very wide selection of inflatable tents for different uses by rescue teams
- △ For short-term and long-term use in many areas - in case of events with an immediate need for service facilities, accommodating people, command headquarters, canteen, material storage, garage or car repair shop, etc.
- △ Selection of many types, sizes and colours
- △ Useable area of the tents ranges from 10 to 180 m²
- △ Made of very high quality, high-strength materials with long lifespan, abrasion resistant, resistant to fading
- △ Long lifespan with only minimum maintenance and repair required
- △ Easy handling and operation
- △ Turnkey delivery of complete tent complexes including all accessories
- △ In individual projects, customizable tents according to customer's needs
- △ Many years of experience manufacturing inflatable rescue tents
- △ Significant references, deliveries for rescue teams (Fire Brigades, Police, Emergency Medical Service) and for Army in the Czech Republic and in many other countries
- △ Service centre in the manufacturer's headquarters

INFLATABLE TENTS – HF SMART series

- △ Very wide selection of tents from 15 to 55 m²
- △ Welded construction from PVC coated fabric
- △ The construction is more resistant to snow loads and big changes in temperature compared to tents from the GTX series
- △ All tents in this series are connectable to each other without connecting passageways
- △ Thanks to a specific system – can be completely disassembled
- △ The roof, floor and structure are made of ignition and flame retardant materials

INFLATABLE TENTS – GTX series

- △ Glued construction from fabric coated with natural rubber
- △ Very wide selection of tents from 10 to 60 m²
- △ All tents are approximately 10% lighter than the HF Smart series
- △ More than 20 years of experience guarantee a long lifespan
- △ Small packaging size

INFLATABLE RESCUE TENTS

INFLATABLE ARMY TENT HF – 46A

- △ Highly resistant inflatable tent
- △ Designed in accordance with the technical requirements for products intended to safeguard national defence
- △ Meets standardisation of NATO armies
- △ Can be additionally equipped with codified accessories that meet military standards: interior liner, sun shield, electric wiring, lighting, etc.
- △ Passed check tests as well as military tests
- △ Codified for use in the army

INFLATABLE TENT COMFY

- △ Ideal tent for volunteer firefighters
- △ Designed for rapid intervention
- △ Option to inflate with one pressure bottle (1 bottle 7 L 300 bar)
- △ Light and easy to store
- △ Set-up facilities within a few minutes
- △ Seamless handling for 2 people

INFLATABLE LIGHTWEIGHT TENT HANDY

- △ Inflatable rescue tent designed to be suitable equipment for emergency response teams
- △ Possibility to pack the tent with a filled pressure bottle in the pocket, creating a complete emergency set needed for prompt set-up (the pressure cylinder and pressure hose are optional, not included in the tent delivery)
- △ Lightweight and easily stored in an emergency vehicle
- △ Set-up facilities within a few minutes in case of inclement weather
- △ Lower weight compared to standard inflatable tents
- △ Trouble-free handling for 2 people

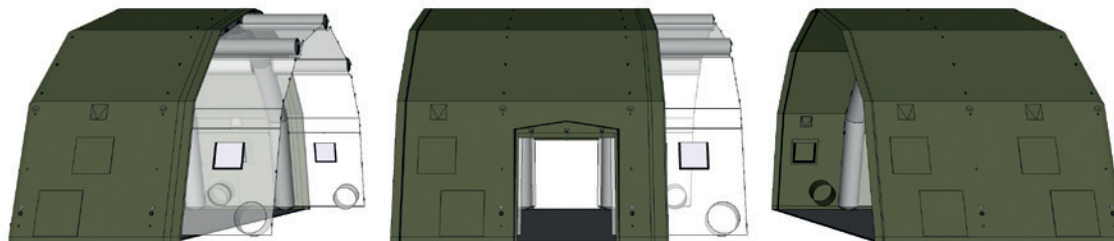

INFLATABLE MODULAR LARGE – CAPACITY HALL

- △ Large-capacity hall with an inflatable construction
- △ Wide practical use - garage, repair shop, material warehouse, canteen, command headquarters, meeting room, large-capacity accommodation for people
- △ The usable area of the hall is 93 m² with 1 centre module or up to 175 m² with 3 centre modules.
- △ Made of high-quality, flame-retardant, high strength materials with a long lifespan, abrasion-resistant, resistant to solar rays

Front module

Central module

Rear module

Front module

Central module – option to use 1 to 3 pieces according to the required useable area

Rear module

- △ Composed of separate modules
- △ Modules connect by means of a sophisticated system of connectors and high strength zip fasteners
- △ Each module is packed in a separate bag for easier transport and handling
- △ Front and rear module fitted with door for entry of person and doors for vehicle entry

FLOOD BARRIERS

- △ Protection against floods and torrential water
- △ Protection for industrial buildings and family houses
- △ Elevation of existing dams or river banks
- △ Creation of an artificial riverbed to redirect the stream
- △ A mobile system of using water against water
- △ Can be used on various types of surfaces (concrete, asphalt, crushed stone, ...)
- △ Impermeably connectable to endless lengths
- △ Connectable even in angles, so it can copy a riverbed
- △ Intended for repeated use

FLOOD BARRIERS WITH A STEEL STRUCTURE

- △ Easy deployment, extra stable
- △ Self-standing even without being filled with water
- △ Tested and recommended by an independent laboratory (the T. G. Masaryk Water Research Institute in Prague, public research institute, Prague, Czech Republic)

WATER-FILLED FLOOD CONTROL BAGS

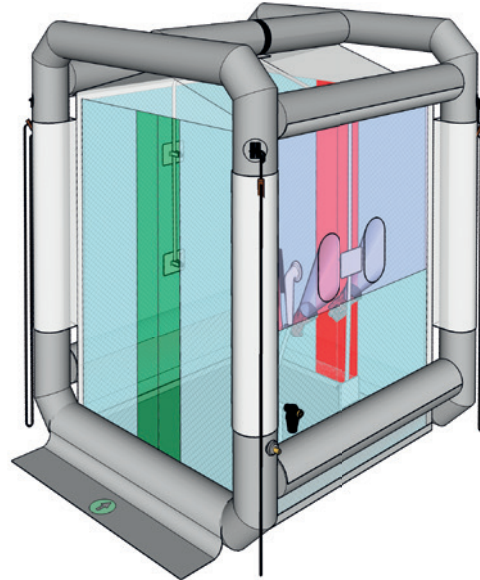

- △ Operation can be managed by 2 people
- △ Minimum logistics demands and good storability
- △ The protective height can be increased by installing them in a pyramid shape consisting of 3 tubes
- △ Tested and recommended by an independent testing laboratory (Water Research Laboratories, Institute of Water Structures, Faculty of Civil Engineering, University of Technology in Brno, Czech Republic)

DECONTAMINATION

INFLATABLE DECONTAMINATION SHOWERS

- △ Necessary equipment for a decontamination post for basic decontamination of the rescue personnel
- △ Designed for decontamination and cleaning people or materials as well as a mobile sanitary facility during rescue actions and liquidation of accidents
- △ Long lifespan with only minimum maintenance and repair required
- △ Selection of several types and sizes
- △ Easy handling and operation
- △ Low weight
- △ Self-acting deployment within a few minutes of being connected to an air supply - Inflatable by compressed air, electric pump or hand pump
- △ One-chamber inflatable frame, retention basin and shower cabin
- △ Installed distribution system with nozzles and a hand-held showerhead to apply the decontamination solution, or water, with minimum consumption
- △ Integrated water distribution system made of plastic or stainless steel

INFLATABLE TENT WITH BUILT-IN SHOWER FOR MASS DECONTAMINATION – DEKON 35

- △ Designed for mass decontamination and cleaning people as well as a mobile sanitary facility during rescue actions and liquidation of accidents
- △ Inflatable tent with inflatable frame, built-in shower, water distribution system and a tub
- △ Removable built-in shower fastened to the frame by Velcro
- △ Transverse partitions to divide the tent into the undressing, showering and dressing sections
- △ Longitudinal partitions to divide the tent into separated corridors
- △ A conveyor for immobile people is available in the central corridor
- △ Removable tub in the shower section
- △ Two independent circuits in the shower part
 - The first circuit for a decontamination agent
 - The second circuit with clean water for rinsing

DECONTAMINATION BASINS

- △ Designed to retain used water after decontaminating people; in case of an accident, bigger types are designed for mass decontamination of people or decontamination and washing of technical equipment.
- △ One-chamber inflatable frame
- △ On request, a water drain can be built in

ACCESSORIES

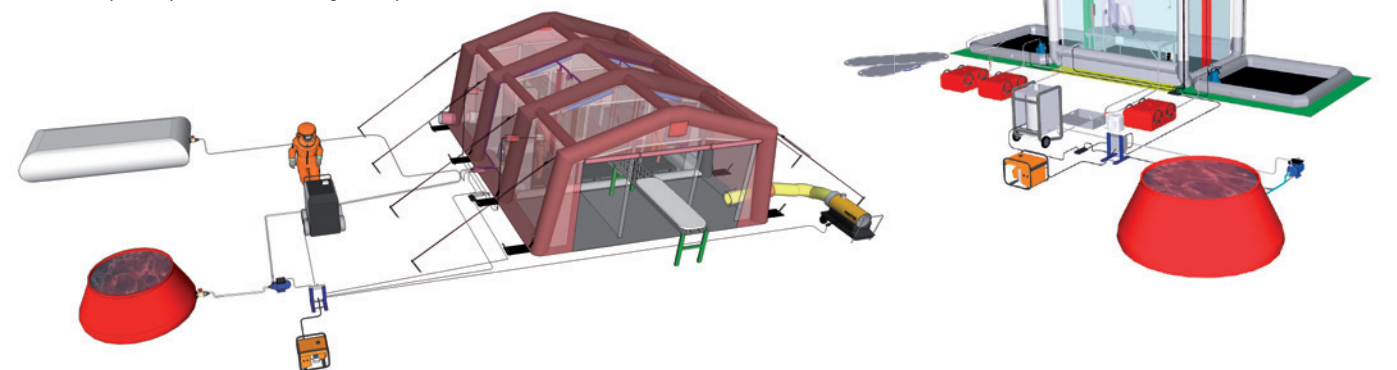

Decontamination can be equipped with the following accessories

- △ Electric blower
- △ Heating generator
- △ Lighting
- △ Floor grates for decontamination showers and basins
- △ Flow water heater
- △ Slurry pump
- △ Self-priming pump
- △ Open, self-supporting basins
- △ Open basins for waste water after decontamination
- △ Drums for storing used protective gear
- △ Admixing device
- △ Conveyor
- △ Decontamination circle etc.\

Complex decontamination solutions

- △ Complex solutions for basic, and mass decontamination
- △ Solutions for customised decontamination sets according to the client's needs
- △ Complete portfolio of fully compatible accessories

SPECIAL PRODUCTS, WATER RESCUE

TANKS FOR LIQUIDS

- △ Ideal for short-term service water storage in remote areas, as a water reservoir in case of wildfire in terrain with limited accessibility, for pumping water to higher levels, and also as a complement to decontamination tents and showers
- △ For special projects - possibility to use a material suitable for drinking water or a material resistant to lubricants, minerals, technical and consumable oils, fuels and other petroleum products

SELF-SUPPORTING TANKS

- △ Open, self-supporting basin available in volumes from 1 000 L to 25 000 L
- △ Can be filled by a suspension bag from a helicopter
- △ A floating pump can be placed inside

CLOSED WATER TANKS

- △ Closed, self-supporting tank available in volumes from 150 L to 2 000 L
- △ Ideal complement to decontamination for trapping contaminated water
- △ Can be placed on vehicles with an open loading space

INFLATABLE RESCUE WALKWAY

- △ General-purpose piece of equipment for rescue teams, fire brigades and other rescue units
- △ Designed for use on unstable surfaces, such as water, ice, crushed ice, swamps, sand and similar
- △ A wide range of possible uses - to help rescue people, as a floating platform to transport materials or people, as a work-platform for divers, etc.
- △ Easy handling, operation and mobility
- △ Quick set-up
- △ Available in sizes of 500×130 cm and 313×82 cm
- △ Inflatable with compressed air from an electric blower or hand pump
- △ Highly resistant material used
- △ Top side of the walkway coated with anti-skid treatment
- △ Ability to connect multiple walkway with ropes and carabines

PROTECTIVE SUIT SUNIT IV FK

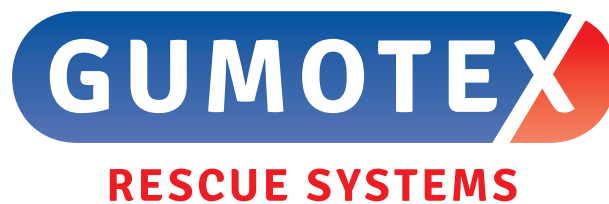

- △ Intended for the disposal of accidents of acids and alkalis
- △ Anti-chemical protection for the user's body against the effects of liquid chemicals, especially against acids and lye
- △ Can be also used in other areas of human activities
- △ Category PPE III in accordance with PPE Group at Commission 89/392/EEC
- △ Impermeable coating from a special rubber blend of textile materials
- △ For a body height of 170 to 194 cm
- △ Wide selection of sizes of suits and boots
- △ Tested and certified by the Occupational Safety Research Institute in Prague according to: CSN EN 14605+A1:2009

TRANSPORT DRYBAG

- △ Waterproof transport bag with a volume of 100 L, intended for storage and transport of equipment
- △ Keeps the equipment hermetically sealed, even during transport in extreme conditions, e.g. during a flood
- △ Sealed against humidity in both the inner and outer sections of the bag interior
- △ Watertight closing without the use of zipper guarantees a long lifespan and maintenance-free operation
- △ Quick and easy watertight closing of the bag even when wearing gloves
- △ All parts are easily washable bag
