MEDIUM CALIBER AMMUNITION

12,7x99 23x151 30x173 35x228

12,7x99 mm rifle cartridges are designed to strike targets such as planes, helicopters, naval vessels, unarmored and lightly armored vehicles as well as fortifications and buildings.

Rifle cartridges are designed for:

- machine gun (12,7 caliber Browning type);
- other types of weapon adapted to this type of ammunition.

30x173 mm round with frangible armor-piercing discarding sabot-tracer (FAPDS-T) are destined to strike lightly-armored targets within the distance of 3000 m using:

- ATK MK 44 cannon Bushmaster II;
- other types of weapon adapted to this kind of ammunition.

23x151 mm FAPDS-T rounds are destined for shooting ZU-23-2 and ZSU-23-4 anti-aircraft cannons. They are used for striking air targets (planes, helicopters), aquatic targets, ground targets (combat vehicles, armored vehicles) and fortifications and buildings at the distance of 3000m. The effect of firing FAPDS-T projectile is combination of knock-down and fragmentation effect.

35x228 mm FAPDS-T rounds are designed for striking flying objects (planes, helicopters) and ground-based targets including combat and armored vehicles within the distance of 4000 m.
