

# LWPS 3.0

**LIGHTWEIGHT WATER PURIFICATION SYSTEM  
3RD GENERATION**

***900+ GPH Product Water Output***

**TACTICAL and FIRST RESPONSE**

**WATER PURIFICATION SYSTEMS**

## SCALABILITY

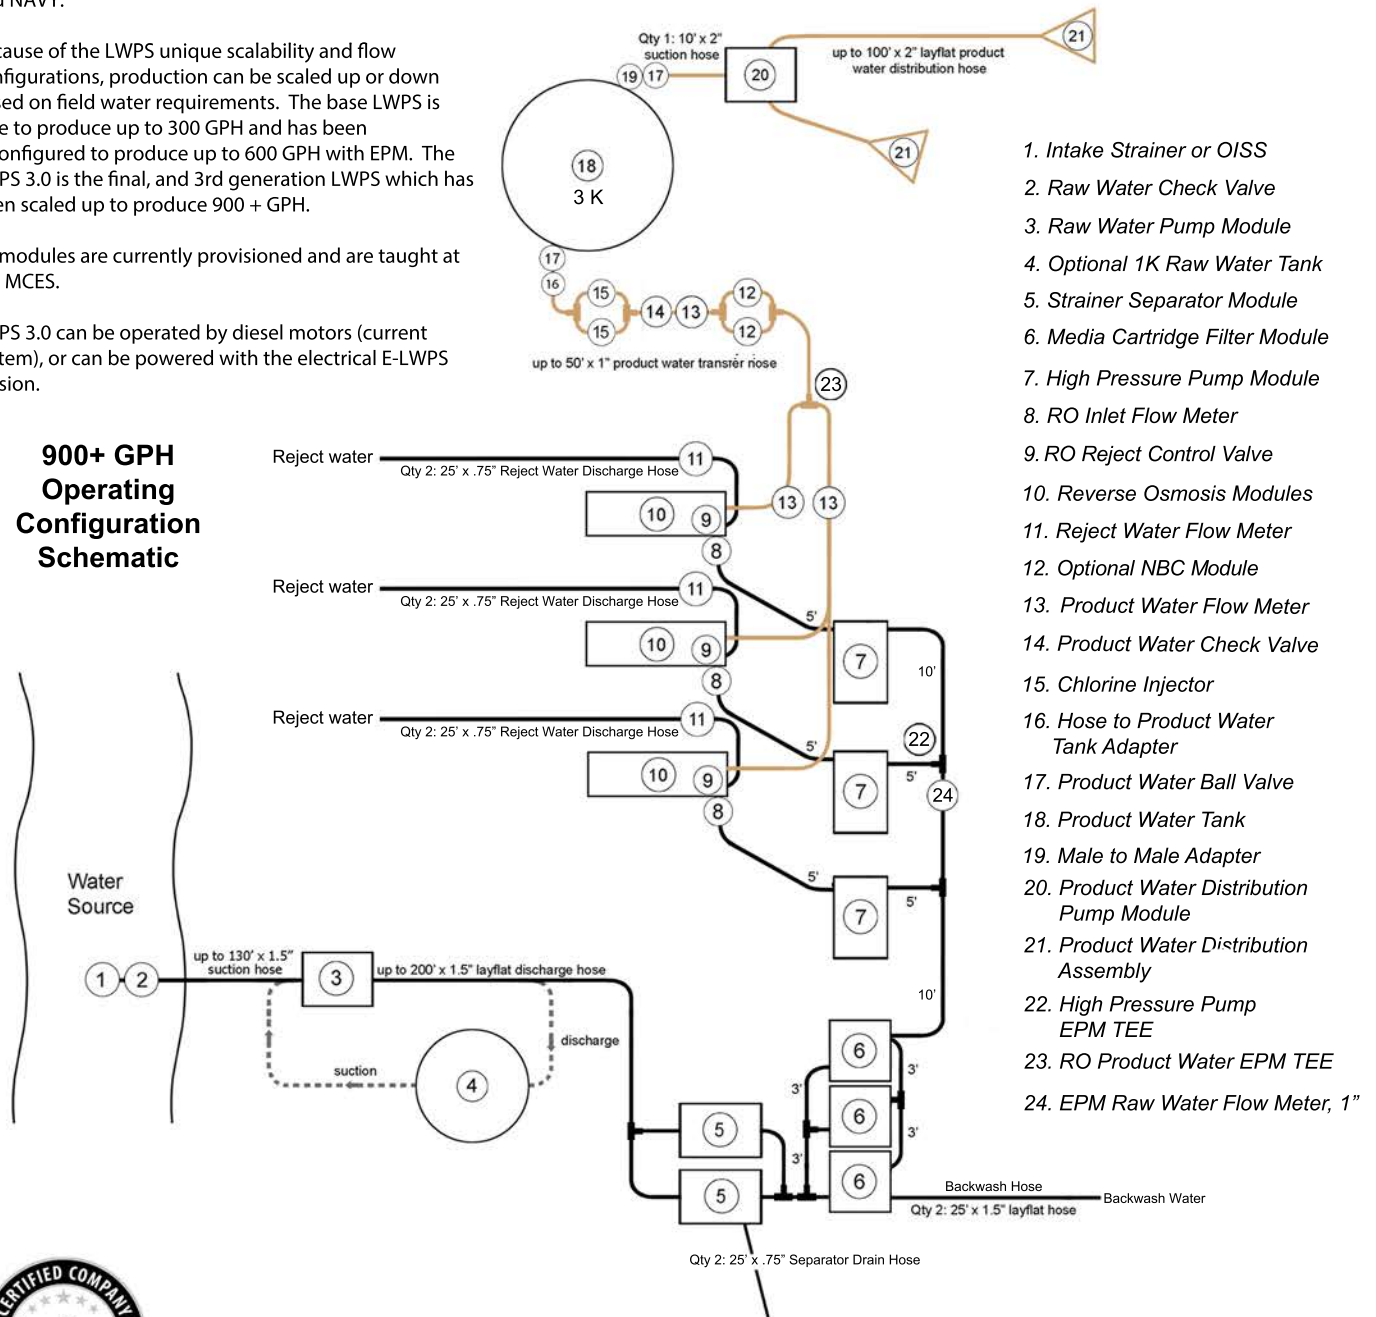

The LWPS 3.0 (Lightweight Water Purification System - 3rd Generation) can produce 900+ GPH simply by adding 5 more alike to the current LWPS EPM configuration. The LWPS with EPM is the system currently used by the USMC and NAVY.

Because of the LWPS unique scalability and flow configurations, production can be scaled up or down based on field water requirements. The base LWPS is able to produce up to 300 GPH and has been reconfigured to produce up to 600 GPH with EPM. The LWPS 3.0 is the final, and 3rd generation LWPS which has been scaled up to produce 900 + GPH.

All modules are currently provisioned and are taught at the MCES.

LWPS 3.0 can be operated by diesel motors (current system), or can be powered with the electrical E-LWPS version.
